

STUDIO SABLE

AFTERCARE INSTRUCTIONS

During tattooing, the skin breaks, causing a wound. If you take good care of the tattoo, it will take about six weeks for this wound to heal.

After putting the tattoo, it is covered with a foil, which you can remove after 3 to 5 hours. After removing the foil, the tattoo must be cleaned and lubricated. You can take a shower right away.

Treat the uncovered tattoo wound as follows:

- wash the tattoo once a day with a mild, unscented, disinfecting soap and lukewarm water;
- after washing, gently pat the tattoo dry with a clean towel, do not wipe;
- Lubricate the wound two or three times a day with an ointment that the tattoo artist has given you or that he or she recommends. Wash your hands with disinfectant soap before applying the tattoo. When the skin becomes very dry, you can apply more often. Keep doing this for two weeks.

During the healing process, make sure to:

- do not scratch the tattoo wound;
- the tattoo wound is not covered with tight or soiled clothing;
- do not cover the tattoo wound with plasters or bandages;
- avoid (bubble) baths, swimming pools, saunas and steam baths;
- do not expose the tattoo wound to sunlight or the tanning bed.

Recommended products for care during healing are Bepanthen baby ointment & Unicura Balans hand soap.

Bepanthen baby ointment

Unicura Balans handsoap

Note: contact your doctor in case of extreme redness, swelling, bleeding, exudate, color change or chronic pain.
